

Our mission is to support all our customers in their efforts to achieve sustainability in their business activities

With a focus on air,
we contribute to a sustainable future in
which the environment provides lasting comfort
and peace of mind for all humanity.

For over half a century, since our establishment in 1964, we have engaged in building facility services as an independent corporate group. Our primary business deals with the air conditioning services industry. We advocate a policy of "preventive maintenance," preempting breakdowns and accidents before they occur.

While air conditioning remains a key business of Nippon Air Conditioning Group, its business domain now encompasses a full range of other services essential to building maintenance and management. In addition to comprehensive building facility maintenance, these include facility and environmental diagnosis, solution formulation, and facility renewal projects.

With a view toward realizing its ongoing vision of elevating the satisfaction of all its stakeholders, the Nippon Air Conditioning Group constantly strives to protect the peace of mind and comfort of customer environments, especially for the users and those who work there, by ensuring the optimal operation of their facilities.

The Nippon Air Conditioning Group draws on a wealth of experience and technological prowess to improve the performance of customer facilities in energy efficiency, cost requirement, and other aspects that help minimize environmental impact.

The Nippon Air Conditioning Group remains committed to delivering ever higher value to society at large through businesses that enhance the sustainability of customer businesses.

Nippon Air Conditioning Group's Management Philosophy

Bringing together the technological capabilities and human resources to maintain optimal environments and give our clients peace of mind through top quality service.

April 2024

Toshiaki Yorifuji

President and Representative Director
Nippon Air Conditioning Services Co., Ltd.
