

Developing Overseas Markets

The task of manufacturers is to provide people with good products which should make people happy. Meanwhile, we do not make any products. More importantly, however, we firmly believe that our capability of maintenance services to “maintain optimal environment” for manufacturers contributes to their activities to manufacture good products on the environmental side.

Our maintenance services for more than half a century in Japan have given us accumulated “technologies” as well as “trusts” from our Japanese customers who are the strictest critics in terms of quality of services on a global basis. We are now keen on horizontally and proudly expanding our “Japan Quality” overseas. The aim is to make people happier on a global basis, while we look forward to seeing smiles on their faces in the foreseeable future.

Nippon Air Conditioning Group's Management Philosophy

Bringing together the technological capabilities and human resources to maintain optimal environments and give our clients peace of mind through top quality service.

Greetings

For over half a century, since our establishment in 1964, we have engaged in building facility services as an independent corporate group. Our primary business deals with the air conditioning services industry. We advocate a policy of "preventive maintenance," preempting breakdowns and accidents before they occur.

Our field hasn't remained limited to air conditioning; we have expanded into building facility systems in general such as electrical, water supply and drainage, and sanitation systems. Along the way we developed our current business model. Through continuing to pursue ever higher quality technological services, we aim for the maximum satisfaction of those who utilize and work at our clients' facilities.

We have a sales base in every prefecture of Japan to quickly provide high-quality services throughout the country. Moreover, we are actively expanding throughout Asia, as we see it as a single economic region. Our facility maintenance services in Asia, which are mainly for Japanese companies, are the same as those that we provide in Japan.

We believe the Nippon Air Conditioning Group's mission is to create optimal building environments through facility maintenance services, and thereby contribute to the common good.

Yoji Tanaka
President and Representative Director
Nippon Air Conditioning Services Co., Ltd.

Business Model

Our company offers comprehensive building facility support. While the main focus of our company is maintenance, management, environmental facility diagnosis, and solution proposals for building facilities, we also have a division that specializes in facility renovation.

Making use of the technological capabilities cultivated through our core business of service maintenance, we provide energy conservation and environmental improvement proposals based on high quality diagnostics and meticulous service to meet our customer's needs.
